

Bring your MonoSpace lift up to today's standards

The KONE MonoSpace® Upgrade gives your existing lift a new lease on life – improving reliability, safety and energy efficiency with minimal disruption.

Since its launch in 1996, KONE MonoSpace lifts have set the benchmark for machine-room-less design. The MonoSpace Upgrade replaces key systems like the controller, drive and signalisation to deliver improved performance, safety and energy efficiency – all with minimal downtime.

Key Benefits

Minimize disruption
Quick installation, no major building works.

Reset your lift's lifecycle
Replace critical components for long-term reliability.

Improve safety & compliance
Evaluate your current lift's condition.

Enhance sustainability
Energy-efficient drive reduces power use and emissions.

Enable connectivity
Ready for KONE 24/7 Connect.

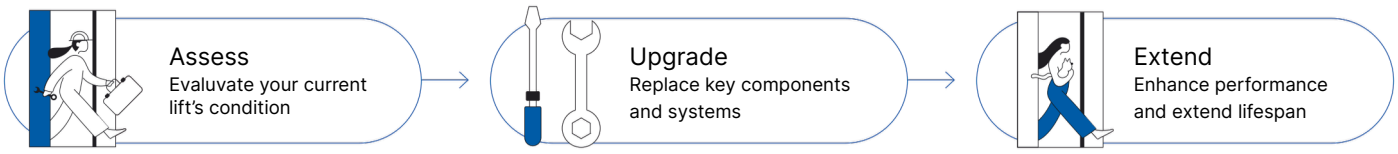

Key Features

Future proof
Replaces ageing components and adds digital services through cloud connectivity.

Modular solution
Mix-and-match upgrades – from partial to full modernisation.

Flexible
Tailored to the lift's condition and customer budget.

The smarter path to modernization

Learn how the MonoSpace Upgrade can improve your lift's performance and reliability.

Dedicated to People Flow™

What's included in the upgrade?

The KONE MonoSpace® Upgrade focuses on replacing only the components that truly need renewing, while keeping those that remain in excellent condition. Each module of the upgrade is proposed according to the lift and building's needs, with optional components included only where they add clear value.

Overspeed Governor (Safety Upgrade)*

Prevents the lift from exceeding its safe operating.

• Increases passenger safety and complies with the latest standards.

Drive System

Controls the speed and movement of the lift motor for smooth, efficient rides.

• Provides greater comfort, energy efficiency, and precise motion control.

Electrification System

Upgraded electrical wiring, control units, and safety connections.

• Boosts reliability, safety, and ease of maintenance with minimal disruption.

New Steel Ropes*

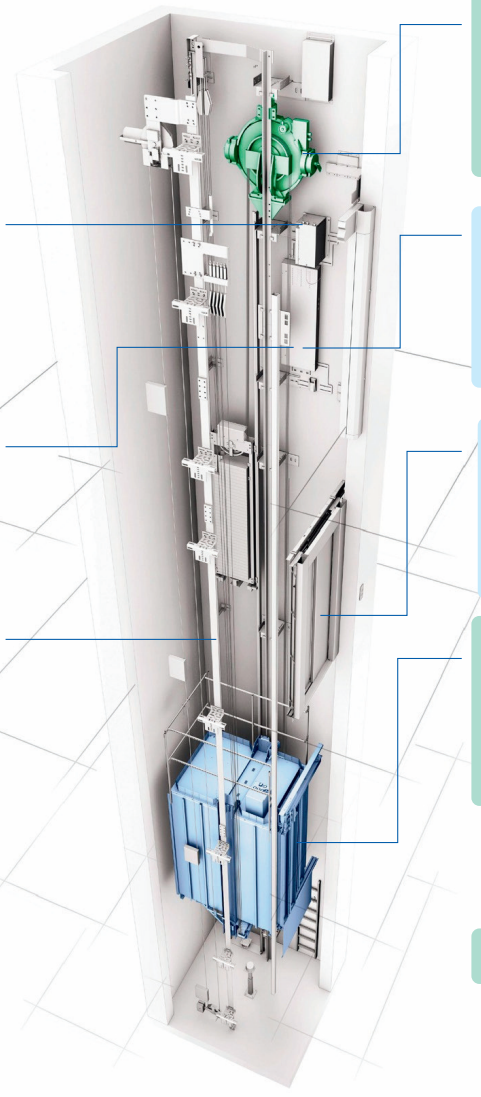

High-quality ropes that safely lift and lower the car.

• Improves durability, ride comfort, and long-term safety.

Digitally Enabled

Smart connectivity that links your lift to digital monitoring tools.

• Enables predictive maintenance and real-time performance insights.

Machine (Silent Brakes)*

The motor that powers lift movement with quiet, efficient operation.

• Reduces noise and energy use while ensuring dependable performance.

Controller

The brain of your lift that manages operations and communication between components.

• Enhances performance, reliability, and allows for future digital upgrades.

Signalization

Modern buttons, displays, and indicators for passengers.

• Offers a sleek, user-friendly experience and enhances accessibility.

Door Upgrades*

New or improved doors and mechanisms for smoother operation.

• Quieter, safer, and more reliable access for all users.

* Optional upgrade (including car interior)

Contact your KONE representative today to learn how we can upgrade any major brand of elevator throughout the lifecycle.
